

Spiritree - \$880.00

Batesville

Dimensions: 15" x 12" x 6"

The Spiritree is a seed-like container designed to function as a biodegradable two-piece cinerary urn that grows into a living memorial in the form of a tree. The top shell, which features small perforations that promote water absorption, is made of an inert, semi-porous ceramic, and is designed to degrade after long-term exposure to the elements. The organic bottom is composed of clay, peatmoss, sawdust, post-consumer recycled paper, and other biodegradable materials.

The Spiritree is designed to facilitate the growth of a tree. The process begins with the selection of a plot of ground that will promote healthy and sustained growth. The Spiritree will accommodate the use of seeds, small saplings or small plants.

The Spiritree is designed so that, when planted, its organic bottom will disintegrate as part of the intended germination process. The ceramic top may weaken but will remain until the contained tree trunk grows large enough to break it. The disintegration-germination-growth period may vary depending on tree selection, selected planting site, and the local weather conditions.

A portion of the proceeds for the sale of a Spiritree go to support the efforts of environmentally responsible causes.

Aquatica \$400.00

Butterworth Urn Co.

Dimensions: 11" x 7"

The Aquatica urn is made of a biodegradable material combined with sand. This creates a unique environmentally friendly urn that, when placed in water, will float briefly and then sink, breaking down entirely within three days.

When buried, the Aquatica urn will biodegrade within three months.

**Reflections Series Biodegradable Scattering Urns - \$580.00
Batesville**

Measures 21 ¼" diameter x 4 ½" deep

Cast from original artwork

Designed specifically for scattering in water

Handmade from unbleached pressed cotton (biodegradable)

Biodegradable bag included and recommended until scattering ceremony

Lid features bas-relief design

Bowl-shaped bottom holds cremated remains

Floats for one to five minutes before descending into water

**Journey Earthurn - \$160.00
Butterworth Urn Co.
Dimensions: 12" x 10" x 3"**

The Journey Earthurn is perfect for ocean or deep water burial. These biodegradable urns are engineered to float momentarily and then gracefully sink. Once on the ocean floor, the urn will break down naturally over time.

Each Journey Earthurn includes a water-soluble plastic bag which dissolves on contact with water, allowing the cremated remains to be dispersed within minutes.

Journey Earthurns are handmade using a centuries old paper making technique. The bark from the mulberry tree is harvested, leaving the tree alive and intact. After the bark is soaked, the resulting pulp is laid out on bamboo screens, often with floral material inlaid, and dried in the sun. Once dry the paper is used to create our beautiful and earth-friendly urns, which will break down in water or soil.

Unity – \$180.00

Eckels 4130 (8 1/2" W x 6 1/2" D x 5" H / Volume: 210 Cubic Inches)

Mini Unity – \$110.00

Eckels 4130M (4" W x 2 1/2" D x 2 1/2" H / Volume: 25 Cubic Inches)

This container is made from biodegradable paper produced from the bark of the mulberry tree, and will break down over time when buried. The cremated remains are placed in a biodegradable plastic bag which is placed in the container. They can also be used as a temporary container. This urn has wildflower seeds embedded in the material that will bloom year after year when the urn is buried near the surface.

Deep Water Biodegradable Urn – Eckles \$540.00

They are engineered to float for approximately five minutes before descending gracefully.
